PROFESSIONAL SUMMARY

Flutter developer with a Play Store-deployed app running live in 4 countries with 1,000+ active users — built and shipped as sole developer. I specialize in Firebase-powered cross-platform apps, clean component architecture, and real-time data systems — including an AI-integrated accessibility app helping hearing-impaired users interact with the world through smart glasses. Currently completing my CS degree while building production-grade software that real people use every day.

TECHNICAL SKILLS

Mobile	Flutter, Dart (2+ years) — cross-platform iOS & Android
State Mgmt	Provider, GetX, BLoC / Cubit
Backend	Firebase (Auth, Firestore, Storage, FCM), RESTful APIs, Dio, JSON Parsing
AI / ML	On-device AI integration, NLP pipelines, text recognition, real-time inference
Architecture	MVVM, Clean Architecture, reusable widget libraries
Tools	Git, GitHub, Figma (design handoff), VS Code, Android Studio
Deployment	Android Play Store — release builds, app signing & submission
Other	Google Maps SDK, SQLite / Hive, Push Notifications (FCM), Agile / Scrum

WORK EXPERIENCE

Flutter Developer — Intern | Codeclix Developers, Lahore, Pakistan December 2025 – Present
Professional Internship

- Led sole-developer delivery of **Cargoo Pass** — a production Flutter logistics app live on the Play Store in **4 countries** (Pakistan, South Africa, Sri Lanka) with **1,000+ active users**, featuring real-time parcel tracking, route optimization, and secure delivery management.
- Built and shipped 3 Flutter apps across e-commerce, booking, and service-based domains, standardizing state management with GetX and Provider to improve UI consistency.
- Architected a shared Flutter widget library adopted across all 3 projects, cutting estimated UI development time by **~30%** and enforcing consistent design system standards.
- Integrated Firebase Auth, Firestore real-time database, and Cloud Messaging (FCM) to deliver secure, live-data, notification-driven user experiences across production apps.
- Contributed to agile sprint cycles and peer code reviews across concurrent projects, maintaining on-time delivery throughout the internship.

Flutter Developer — Freelance & Self-Driven Projects | Independent · Remote 2024 – Present
Personal & Open Source Development

- Developed **EchoSee** — an AI-powered accessibility app for hearing-impaired users that converts spoken audio to real-time Urdu/English text displayed on smart glasses, integrating on-device AI for live speech recognition and text rendering.
- Built **FitQuest**, a home fitness tracking app with structured workout plans, real-time progress monitoring, and Firebase-powered challenge systems — designed for users building strength at home without gym equipment.
- Engineered **Blood Bank App** (Final Year Project — Expected December 2026), an emergency donor-patient matching platform with live Firestore updates, FCM push notifications, and real-time emergency alert broadcasts.
- Published and maintained **18+ public Flutter repositories** on GitHub, each following MVVM / Clean Architecture with reusable widget patterns across all projects.

PROJECTS

Cargoo Pass — Logistics & Delivery App *Live · Play Store · Pakistan, South Africa, Sri Lanka · 1,000+ Users*
Flutter · Firebase · RESTful APIs · Google Maps SDK · Real-Time Tracking

Production-grade logistics app with real-time parcel tracking, route optimization, and secure delivery management. Built as sole developer and deployed on the Play Store — actively serving 1,000+ daily users across multiple countries.

EchoSee — AI Accessibility App *Completed · AI-Integrated*
Flutter · AI/ML · Speech Recognition · Urdu/English NLP · Smart Glasses Integration

Accessibility-focused app for hearing-impaired users: converts live speech to real-time Urdu and English text displayed through smart glasses. Integrates on-device AI for speech recognition and instant text rendering — making conversations accessible for users who cannot hear.

Blood Bank App *FYP · In Progress · Expected December 2026*
Flutter · Firebase · Dart · FCM

Final Year Project: emergency blood donation platform connecting donors with patients in real time. Features donor registration, emergency alert broadcasts, live Firestore updates, and FCM push notifications for life-critical scenarios.

FitQuest — Home Fitness Tracker *Completed*
Flutter · Firebase · REST API · Social Features

Home fitness app with structured bodyweight workout plans, real-time progress tracking, and Firebase-powered challenge systems — enabling users to build strength at home without gym equipment.

AI-Based Automatic Resume Ranking System *GitHub*
Python · NLP · AI/ML · Scikit-learn

NLP pipeline that parses resumes, extracts skill and experience keywords, and ranks candidates against job descriptions — demonstrating proficiency with text analysis and ML-based scoring pipelines.

EDUCATION

Bachelor of Science — Computer Science *2023 – 2027 (Expected)*
COMSATS University Islamabad, Vehari Campus

ADDITIONAL INFORMATION

Languages: English (Professional), Urdu (Native) **Freelance:** Active Flutter Developer on Upwork **GitHub:** 18+ public repositories including live production code
